## ADJUSTABLE ROUND DIFFUSER

Designed for smooth 360° air distribution

### MODELS ICL - High Ceiling Round Diffuser Spun Aluminum

The Airvector® **ICG** Aluminum Adjustable Round Diffusers are recommended for heating, ventilating, and cooling applications. **ICG** diffusers provide a 360° air diffusion pattern and excellent performance in VAV systems.

Full adjustability is possible by rotating the inner core clockwise or counterclockwise to move the cones up or down, changing from horizontal projection to vertical projection in accordance with the supply air temperature and reducing stratification. **ICL** diffusers provide great performance in temperatures differentials up to 54°F (12°C) and are suitable for premises with ceilings 8.5 ft (2.6 m) and higher.

### KEY FEATURES

- Heavy-gauge aluminum construction
- Fully adjustable
- Powder paint coating - White (custom finishes available.)

**Performance Notes**

- NC value based on 10 db room attenuation
- Throw values are based on isothermal air and terminal velocity of 40 fpm
- For exposed duct application, multiply throw values by 0.7
- Downward Projection of Heated Air values represent the distance to a total air velocity of essentially zero. The two values are for 6" neck and 12" neck. In horizontal position.
